Ratndeep Kaushal

Gurgaon, India | +918840610358 | ratndeepk07@gmail.com | Linkedin

Profile Summary

Data Engineer (~5 years) specializing in scalable data platforms on AWS and Databricks. Skilled in SQL, Python, Spark, ETL/ELT, and data warehousing. Hands-on with AWS S3, Glue, Redshift, Athena, Lake Formation, Lambda, and Kinesis for ingestion, transformation, and governance. Migrated legacy systems to Databricks, built curated ARD layers, and implemented MLflow-based deployment workflows. Known for improving performance, reducing costs, and delivering reliable, production-ready pipelines end-to-end.

Work Experience

Business Technology Solutions Associate Consultant, ZS **July 2024 – Present**
Gurgaon, India

- Led the modernization of a legacy analytics platform by migrating C-SCAN to Databricks, integrating Redshift via Foreign Catalogs, building curated ARD layers, and enabling secure data sharing. Configured Genie for conversational analytics and implemented MLflow for experiment tracking and deployment, establishing a scalable, future-ready data platform.
- Designed and implemented a GenAI-powered SIT automation framework using Python and AWS, reducing manual testing by 40%, saving $150K+ annually, and delivering efficiency equivalent to 5 FTEs globally within space.
- Automated data workflows on AWS (S3, Glue, Redshift, Athena, Lake Formation) improving pipeline reliability, reducing processing time, and strengthening governance.
- Built Python automation utilities for large-scale file handling (500GB+), decommissioning legacy IDM EDL services and modernizing version control by migrating critical scripts from SVN to GitHub.
- Improved performance of high-volume reporting pipelines by refactoring SQL and Spark jobs, reducing query latency by 40 percent and enabling faster downstream analytics.
- Strengthened production reliability by implementing proactive monitoring, automated alerts, and root-cause fixes, reducing recurring incidents and improving SLA adherence.
- Coordinated with product, QA, and data engineering teams to plan and execute production releases as technical release owner, ensuring zero critical failures during deployment.

Business Technology Solutions Associate (including Internship period), ZS **Mar 2021 – June 2024**
Gurgaon, India

- Built and enhanced ETL pipelines to ingest new data sources into AWS Redshift, adding 10+ integrations and enforcing quality checks.
- Improved warehouse models using star-schema design, supporting 60+ Tableau and MicroStrategy reports with consistent metrics.
- Developed and validated analytical reports for business stakeholders, ensuring accuracy and usability for 1,000+ field teams.
- Resolved production issues and supported SIT/UAT cycles, ensuring reliable and timely releases.

Technical Skills & Expertise

- Data Platforms: Databricks, Delta Lake, Amazon Redshift
- Big Data & Processing: Apache Spark / PySpark, SQL
- Cloud (AWS): Glue, Athena, Lake Formation, Kinesis, Lambda
- Data Engineering: ETL/ELT pipelines, ingestion design, performance optimization, data quality & validation
- Programming & Tools: Python, GitHub, SnapLogic
- Analytics: Tableau, Power BI
- AI & Automation: MLflow, GenAI-driven automation frameworks

Certificates & Achievements

- AWS Data Engineer Associate
- Databricks Data Engineer Associate
- Python Microsoft Certification (MTA)
- Deep Learning Certification (deeplearning.ai)
- CMMI Audit Level 3 (ZS) Award
- Game Changer Award (ZS)
- Big Data Certification (Coursera)
- Ace Associate Award (ZS)

Education

Bachelor's Degree, Galgotias College of Eng. & Technology (Computer Science) **2017-2021**
